PROFESSIONAL SUMMARY

Computer Science graduate with a strong business emphasis and a proven track record of optimizing backend systems and application pipelines. Experienced in refactoring legacy codebases, optimizing network processing speeds, and bridging the gap between software engineering, network, and stakeholder requirements.

EDUCATION

Bachelor's Degree in Computer Science with a Business Emphasis	2026
Grand Canyon University	3300 West Camelback Road Phoenix, AZ

WORK EXPERIENCE

Supply Chain AI / Bayesian Belief Network Intern	10/2025-Current
Six Sigma Experts	

- Developed a patent-pending BBN and AI / machine learning model for supply chain risks.
- Reduced latency and processing speed 73% by refactoring the BBN AI model.
- Built web UI to visualize Supply Chain Resilience demonstrated for stakeholders including IBM.

Systems Analyst Intern	06/2025-08/2025
J.S. West Milling Co.	501 9 th Street Modesto, CA, 95354

- Reduced codebase size 50% while maintaining parity, by refactoring legacy applications within Agile sprints.
- Designed a digital dashboard UI and integrated physical hardware with division-wide network infrastructure.
- Validated proprietary business logic and user configurations on isolated test servers to maintain strict data security.

Computer Science Tutor	08/2023-04/2026
Grand Canyon Education	3300 West Camelback Road Phoenix, AZ

- Guided students through Data Structures, Algorithms, and OOP across Java and Python.
- Translated complex programming concepts into clear, accessible explanations.
- Developed structured learning materials while maintaining FERPA compliance.

PATENT

Supply Chain Resilience Methodology Utilizing Bayesian Belief Networks and Machine Learning
Developed a probabilistic modelling methodology using Bayesian Belief Networks and AI / machine learning which enables organizations to evaluate risk, simulate “special cause” events, and optimize decision-making for sourcing and mitigation strategies.

PROJECTS

Enterprise Database Refactor | Backend Development, System Integration
Refactored a legacy database to improve maintainability and system performance. Reduced overall codebase size by approximately 50% while preserving full functionality through structured validation and testing.

Python Automation and Data Workflow Tool | Python, Data Processing, Scripting, Beautiful Soup
Improved overall data workflow efficiency 60% by eliminating manual data handling. Implemented scalable data pipelines to support consistent and repeatable processing.

TECHNICAL SKILLS

Languages	Python, JavaScript, Java, C/C#/C++, SQL, Go
Frameworks and Libraries	Spring Boot, React, OpenGL, Node.js, NumPy, Pandas, Matplotlib, Beautiful Soup
Developer Tools	Git, Visual Studio Code, PyCharm, Eclipse, Postman, Ghidra, JIRA
Core Methodologies	Agile/Scrum, OOP, Data Structures and Algorithms, Probabilistic System Modeling
